

Appendix I: Data Sources

The Australian Government holds one of the most comprehensive sets of records of international movers in the world. Occupational detail (down to the four-digit Australian Standard Classification of Occupations (ASCO) level) is recorded and stored electronically for the following categories of movers:

Arrivals

- Persons entering Australia on a permanent basis (that is, they hold permanent residence visas - sometimes referred to as settlers) who say they are part of the workforce.
- New Zealand citizens who say they are part of the workforce and intend to settle here permanently or who enter on a long-term basis (defined as arriving in Australia with the stated intention of staying a year or more).
- All others who do not hold permanent residence visas but who intend to visit Australia long-term and who are in the workforce.
- Australian residents (that is, persons born in Australia or persons who hold permanent residence visas, including New Zealand citizens who normally live in Australia) who are returning from a long-term stay overseas (defined as a year or more).

Departures

- Residents leaving Australia who declare that they are leaving permanently.
- Residents who indicate that their departure is for a long-term visit overseas (defined as a year or more in duration).
- Visitors (persons not holding permanent residence status) who are leaving Australia after a long-term stay of a year or more.

For each of the persons moving in and out of Australia in the above categories, apart from occupation (if in the workforce), information is available on birthplace, citizenship, age, sex, place of origin for arrivals and place of destination for departures, and visa category. No data are available for education level. Occupational data are not available for residents or visitors who move in and out of Australia on a short-term basis (defined as less than a year's duration).

Limitations of the data

While the information described is of great value for the purposes of this study, it has limitations. First, as noted above, no occupation data are recorded for persons who arrive for short-term visits or, in the case of Australian residents, those who are returning from a short-term visit overseas. This means that the data tend to understate the contribution of skilled visitors to the Australian workforce. This is particularly so in the case of arrivals holding long-stay business visas (visa category 457) who are permitted to stay for up to four years but often indicate that their visit is to be short term (that is, less than one year's duration). These 457 visa category visitors would normally undertake skilled work in Australia.

Second, the veracity of the occupation data depends on the traveller filling out his or her passenger card accurately. (One exception is those entering Australia as permanent residents in the skilled categories or on long-stay business visas whose occupational data are taken from electronic data sources entered by DIMIA officers at the overseas issuing post). Passengers often do not fill in the full detail of their occupation. Thus instead of saying that they are an electrical or mechanical engineer, they simply write 'engineer'. Or instead of indicating their occupation is primary or secondary teacher they write 'teacher'. Teachers are not shown here by category for this reason. In the case of natural and physical science professionals, detail for each component occupation is provided along with a total for the category. However, the detail for the component occupations must be treated with caution. It is likely to be accurate for the settler group because it is taken from on-line sources (rather than from the passenger card) deriving from the original application process. But for other movement categories the information comes from the less reliable passenger card. Thus the 'other natural and physical science' sub-category tends to be artificially increased because those coding the passenger cards often do not have enough information to be precise about which occupation within the natural and physical sciences the person occupies.

Third, there is the possibility of people incorrectly filling in the time period of their visit or stay overseas. In the case of visitor arrivals, it is common for the same person to indicate that he or she is entering Australia for a long-term stay more than once in a particular year. For example, a long-stay business visa holder may enter Australia intending to work for more than a year, but go home for Christmas. When returning to Australia after Christmas he or she may quite correctly say (again) that a long-term stay is intended. The data set utilised in the analysis here include an indicator for each long-term arrival as to whether the entry is the first or a subsequent entry. Analysis of these data has shown that about a third of visitor entries recorded as long-term are second or subsequent entries. Thus published information of the movements of long-term visitors (including that reported in Australian Bureau of Statistics (ABS) publications) may exaggerate the number of people entering Australia for such visits. For this study we have not taken account of duplicate entries because there is no parallel indicator for 'first' and subsequent departure for visitors leaving Australia after a long-term stay. To some extent the 'excess' of long-term visitor arrivals will be counteracted by duplicates in the departure data as well.

Fourth, there is the problem of 'category jumping'. Both residents and visitors may not leave or stay for the period they state on their passenger card. The ABS has recently calculated the extent of 'category jumping' for the year 2001-02 and as a consequence has revised down the previous estimate of net annual migration from 133,684 to 110,556.¹ The ABS has indicated that most of the category changes are

of long-term visitors who do not stay for a full year, residents who say that they are leaving long-term but in fact return to Australia within a year, and both visitors and residents who say they are arriving or departing for short-term visits but in fact stay for a year or more.² There is no way of adjusting the skilled occupation numbers as a result of these category changes because the ABS does not make any adjustments by occupation.

Finally it is difficult to assess the 'quality' of movers. As noted, there are no data on educational level in the overseas arrivals and departures data base. It is obvious that the value to Australian employers of movers such as doctors, university lecturers, engineers and so on will vary sharply according to the qualifications and experience these persons bring with them. Those selected under the Government's Independent program are far more likely to be able to productively enter the Australian labour market than those entering under the family reunion or humanitarian programs. In these latter categories there is no consideration of qualifications or English language skills in the selection process. This 'quality' issue will be explored further below.

These caveats indicate that the apparent precision shown in the tables can be misleading. The information presented should be regarded as indicative of the impact of international movement on Australia's skilled workforce. Nevertheless, the Australian data provide a rich source of information on the origin and destination of arrivals and departures by occupation for most of those with work rights in Australia, as well as some characteristics of the mover, including birthplace and citizenship.
